Arma 3 exile territory guide

Press "Active" next to the command line. Switch to "@ exileererver / addons" and download "exile_server_config.pbo" after downloading it, right-click on the file and select "Extract to exile_server_config" in the PBO Manager.Naviga menu to the "Exile_server_config" folder created again created .CPP "with Notote ++ lock and scroll to the line under the sections of the document and edit the fields as requested: Construction: Line 2705-2721 TerritoryLifetime = 7 (days before the territory unpaid) ConstructionLifetime = 2 (days before of the construction outside the territory is removed after making these changes, eliminates the old "config.cfg" and upload the modified version. The following guide will teach you how to install the exile to your weapon server by executing the execution of Exile on "Mod Manager" in the control panel. For example, the control panel) containerelifetime = 7 (days before the territory containers are removed) Vehiclelefetime = 3 (days Before unused vehicles) Vehicles: Line 2955-3039 VehiclesGridsize = 2200 (Grid Size and Spawns Vehicles) VehiclesGridamount = 2 (quantities of vehicles to be generated in each grid configured above) VehiclesDebugmarkers = 0 (creates global debugging markers) Damagechecance = 20% (possibility of damaging a HitPoint vehicle) MaximumDamage = 0.9 (total amount of damage that can be applied when a vehicle is increasing) Note: If you want to add vehicles to the spark list, add them to the sections of water and Earth (lines 2966-3028). Now you can delete the "Exile_server_config" folder. Make the following changes, as shown in the image: CFG: @ExileServer base.cfgconfig: @exileServer config.cfgmod: @exile; Kart; Mark; Heli; Servrmod: @ExileServer; Profiles: SCNAME: SCAUTEINIT: Ã ç å "" (checked) Press "Apply" to save the Download "config.cfg" .Open "config.cfg" with notes ++ lock and change the following fields to your liking: hostname - the name of the server that will be represented online password - USA USA If you want to view the password Protect your serverPasswordMin - Used for EngineServerCommandPassWordSWord - Used Player Server settings (NOTE: NOTE: It is not allowed to set it to a higher number of the quantity of slots that you are Paying, if you try to make sure that your server will be disabled) persistent - it should be set to "1" for the use of autoinit in the AutoInit server startup commands it is also necessary to change "ReliableBuild" to "133741" , you will have to adjust it with each weapon update 3. Switch to "@exileServer" and download "ESTDB-conf.ini" Open "ESTDB-Conf.ini" with Notepad ++ and modify the following fields accordingly: [Exile] Type = MySQL (this should remain the same) Name = Exile (Schema name for the Exile database) Username = BusyBee (your MySQL username) Password ¢ = ABC123! (Your MySQL Password) IP = 127.0.0.1 (Your MySQL Host) You can get these details by pressing "Show MySQL Details" in the Control Panel. After making these changes, eliminates the old "ESTDB-conf.ini" and upload your modified version. Make sure you remove the "," behind the latest vehicle entry! NightVision = 1 (Enable or disable or disable night vision on all vehicles) Thermalvision = 0 (Enable or disable thermal optics on all vehicles) unlockinsafezonesafterreStarts = 0 (set this to 1 To unlock vehicles on the server startup if I am in safe areas): Line 3129-3191 ServerPassword = * (use ServerCommandPassword that you have set up in "Config.cfg" previously) Useaustolock = 1 (AutoLocks server up to Ready players to accept) RESTARTOLOCK = 3 (the server will automatically be automatically undercuck At that moment before reboot)] = {3.0} (number of hours and minutes of the reboot period) = 1 (Kick players before restarting to prevent gear loss) Kicktime = 2 (time before restarting that kick players server) useStmessages = 0 (notify server reboot players) restartwaringtime [] = {15, 10, 5 , 3} (number of minutes minutes Restart to inform your players) Useshutdown = 1 (Force Server to completely turn off and close) After making these changes, right-click on the "Exile_server_config" folder and select "Pack in the exile_server_config.pbo" in PBO Manager Menu. Switch to the "File Manager" in the control panel. Browse the "@ExileServer" folder. Install "Exile V1.0.3 - Limone" under the "Exile" category.
